We can not guarantee that the information on this page is 100% correct. Read more Review360° view Pictures Compare Opinions Several users have asked me for help regarding rooting their Nokia phones. The most common requests come from the owners of Nokia 6.1 Plus (Nokia X6), Nokia 7 Plus, Nokia 6.1, Nokia 7.1, and Nokia 7. Unsurprisingly, Nokia develops all these phones on the same software base – GSI_SDM660. Since the base is the same, it is very similar to install Magisk and root each of these phones. This guide is one of the easiest and most relevant to root these Nokia phones. So, you do not need to browse the XDA forums where a lot of conflicting and outdated information is present. Before you begin: Install all pending software updates on the phone so that you are on the latest version. Updates are harder to install when rooted, so, it is better if you start from the latest version in the first place. Root Method 1: Magisk patched boot images (recommended) Magisk patched images make it very easy to root a Nokia smartphone. When you boot them, you get a temporary root, which is enough to push Magisk to your stock boot image and gain permanent root. The only requirement for these boot images to work properly is that the security patch installed on your phone should match the security patch indicated in the boot image. Make sure that your Nokia has an unlocked bootloader. (Read: How to unlock bootloader?) Check the installed Android security patch on your Nokia phone. Open Settings > About phone > Android version > Android security patch level. Check Android security patch level On your phone: Download and install Magisk APK file. Download Magisk from Github. On your PC: Download the Magisk patched boot image for the same Android security patch. For example, if you are on May 2019 update, then use patched image for May 2019. Download patched boot image. Reboot your Nokia to download mode. (Read: How to enter Recovery and Fastboot mode?) Boot the downloaded Magisk patched image using the following command. Warning: Do not flash it. fastboot boot magisk-patched-boot.img Note For devices on Android 10, you might not be able to boot the file directly and the phone will get stuck on Android One screen. In that case, go back to download mode, then first flash the file to your recovery partition (which does not exist) and then boot it. So, first, run: fastboot flash recovery magisk-patched-boot.img It will show an error in CMD. After that try to boot the file using the below command: fastboot boot magisk-patched-boot.img Wait for the phone to start up. Then open Magisk app. Select No if Magisk asks for additional setup. You will see “Magisk is installed” and an Install button next to it. Magisk Direct Install Press on Install > Install > Direct Install (recommended). Wait for the installation to finish. Then press on the reboot button to finish it. The phone will restart, and you will have permanent root. Now you can start using your root apps. Most likely you’ll start off with restroing your apps backed up using Titanium Backup. Root Method 2: Using TWRP If you are unable to use the pre-patched images, then you can fall back to the classic method of using TWRP custom recovery. Backup all critical data from the phone as we will wipe the internal storage. Ensure that your bootloader is unlocked. On your PC: Download TWRP recovery for your device from the following links. On your PC: Download the latest version of Magisk zip. You can download Magisk from Github. Reboot your Nokia into Download Mode. Since most TWRP images will have issue in decrypting the userdata, we will wipe it: fastboot erase userdata Now boot the TWRP recovery. Warning: Do not flash it. fastboot boot When the TWRP loads, copy the Magisk zip file from your PC to the internal storage of the phone. On your phone: Tap on Install and select the Magisk zip file. Then swipe to confirm the flashing. Reboot when done. If all went right, you will have a rooted Android system and you can start using your root apps. It was launched on 25 February 2018[5] in China as the successor to the first-generation Nokia 6. Specifications Hardware The second-generation Nokia 6 is powered by the Snapdragon 630 microprocessor, an upgrade from the Snapdragon 430 present in its predecessor. Depending on the version, it either comes with 32 GB storage and 3 GB of LPDDR4 RAM or 64 GB storage and 4 GB of RAM.[6] The display panel is the same 5.5" 1080p IPS LCD as the original, although the front bezels have been slimmed down and the capacitive navigation buttons and home button have been replaced with on-screen keys.[7] The camera setup is also the same combination of 16 MP rear and 8 MP selfie found in its predecessor, and retains the "Bothie" feature, which uses both cameras and splits the screen in half to capture an image[8] or does picture in picture mode, showing the inwards camera in a small rectangle on top of the outwards camera, or vice versa. One of the main changes is the replacement of the micro-USB port in favor of the reversible USB-C, as well as the shift of the fingerprint sensor to the rear of the device. It keeps the 3.5 mm headphone jack. The Nokia 6.1 also supports Nokia OZO audio. Backside view of used Nokia 6.1 Software The phone was launched in China running Android 7.1.1 Nougat and was upgradable to Android 8.0 Oreo, Android 9 Pie followed by Android 10. All other versions, including the international one, which launched later, ship with Android 8.1 Oreo,[9] upgradeable to Android 9 Pie since the end of October 2018 and Android 10 since 10 January 2020.[10][11][12] It is part of the Android One program, which means the device gets 2 years of Android OS updates and 3 years of security updates and is therefore upgradeable up to Android 10. Reception The Nokia 6.1 mostly received positive reviews. Holly Brockwell of TechRadar praised the phone’s software, design and screen while criticising the battery, camera and audio.[13] References ^ "Nokia 6.1 with Android One". Nokia.
